

Hello

I am Caleb .

I'm impressed by Storylines' commitment to sustainability through the use of biodegradable or reusable items and LNG as the cleanest burning fossil fuel for powering ships. Your efforts to ban plastic water bottles, use metal spoons instead of plastic stir sticks, and serve condiments residential style in food service areas demonstrate your dedication to being among the most innovative and eco-friendly passenger vessels in operation.

Anyways, I'll be super quick because I know you have things to do!

I am bringing your attention to an issue of web performance STORYLINE , as i did not have the best user experience due the poor web performance . The current bounce rate of 47.83% suggests that users are leaving after viewing only one page.

- The size of the image is very large and not optimized ,
- Caching should be utilized , this improves load time of previously visited we pages
- Javascript and css file should be minified

Here is a video loom link explaining what I can assist with in terms of performance and web development

<https://www.loom.com/share/6e52fe4633384e4789fe086c13547d27>

I am interested in working in your frontend team and help make better features and improve the over all performance . I attached a link to my resume in this mail , there you can find my projects and my portfolio

Regards

Caleb
